

Fundraising Platform flow in a nutshell

Fundraising platform in detailed steps:

A. Athlete Profile and Subscription

1. The athlete creates an account on the platform.
2. The platform distinguishes athlete accounts from regular supporter accounts.
3. The athlete completes their profile by adding information about themselves, their sport, and the content they intend to offer.
4. The athlete creates a subscription plan.
5. The athlete sets the price of one subscription month in USDC.
6. One subscription unit corresponds to one month of access:

1 subscription unit = 1 month of subscription

7. The athlete defines the standard content and benefits available to active subscribers.
8. An active subscription may provide access to:
 - posts and updates from the athlete,
 - training materials,
 - photos and videos,
 - subscriber-only content,
 - a private community area.
9. A supporter may purchase one or more subscription months.
10. A supporter may purchase future subscription months in advance

B. Creating a Crowdfunding Campaign

11. The athlete creates a crowdfunding campaign connected to their subscription plan.
12. The athlete provides the campaign title.
13. The athlete adds a campaign description.
14. The athlete sets the minimum campaign success threshold in USDC.
15. The minimum success threshold should represent the lowest amount required for the athlete to deliver the campaign and the promised rewards.
16. The athlete may set a main campaign goal above the minimum success threshold.
17. The athlete may define one or more additional stretch goals.
18. The main goal and stretch goals may unlock additional community-wide benefits for campaign participants.
19. The athlete sets the campaign start date.
20. The athlete sets the campaign end date.
21. The athlete defines individual reward tiers based on the number of subscription units purchased by a supporter during the campaign.
22. Example reward tiers may look as follows:

1+ subscription unit:
- one-on-one session

5+ subscription units:
- one-on-one session
- autograph

10+ subscription units:
- one-on-one session
- autograph
- tennis racket

- 24. Rewards from higher tiers are cumulative by default.
- 25. A supporter who reaches the 10+ tier also receives the rewards included in the 1+ and 5+ tiers.
- 26. The athlete may specify that a particular reward is non-cumulative, but this must be clearly stated before the campaign begins.
- 27. The athlete may limit the availability of rewards involving personal work or physical items.
- 28. Example limits may look as follows:

One-on-one session:
maximum of 10 supporters

Signed tennis racket:
maximum of 3 supporters

Autograph:
maximum of 100 supporters

- 29. The athlete may also set the maximum quantity of a particular reward available to one supporter.
- 30. The price of one subscription unit is stored in the campaign when the campaign is published.
- 31. The subscription unit price assigned to the campaign cannot be changed while the campaign is active.
- 32. A later change to the athlete's general subscription price does not affect an already active campaign.
- 33. The athlete confirms all campaign conditions.
- 34. The campaign is published and receives the following status:

Active

C. Displaying the Campaign to Supporters

- 35. A supporter opens an active athlete campaign.
- 36. The supporter sees the price of one subscription month.

- 37. The supporter sees the minimum success threshold.
- 38. The supporter sees the main goal and all stretch goals.
- 39. The supporter sees the current amount raised in USDC.
- 40. The supporter sees the campaign completion percentage.
- 41. The supporter sees the remaining campaign duration.
- 42. The supporter sees all individual reward tiers.
- 43. The supporter sees whether rewards are cumulative.
- 44. The supporter sees the remaining availability of limited rewards.
- 45. The supporter sees the number of Support Points they will earn by purchasing the selected subscription units.
- 46. The supporter sees information about the additional Support Points bonus available if the campaign succeeds.
- 47. The supporter sees their current Support Points balance.

D. Purchasing a Subscription During a Campaign

- 48. The supporter selects the number of subscription months they want to purchase.
- 49. The supporter may select one or multiple subscription units.
- 50. The system calculates the payment amount:

$$\begin{aligned} \text{payment_amount} = \\ \text{purchased_subscription_units} \\ \times \text{subscription_unit_price} \end{aligned}$$

- 51. For example:

Price of one month: 25 USDC
Number of purchased months: 11

$$\begin{aligned} \text{Payment amount:} \\ 11 \times 25 \text{ USDC} = 275 \text{ USDC} \end{aligned}$$

- 52. The system calculates the supporter's immediate subscription expiration date and the projected expiration date that would apply if the campaign succeeds and all pending units are activated.
- 53. The system calculates the total number of subscription units previously purchased by the supporter within the same campaign.
- 54. The system determines the highest individual reward tier the supporter will reach after the purchase.
- 55. The system calculates the number of base Support Points awarded for the purchase.
- 56. The following conversion rate applies:

$$1 \text{ subscription unit} = 100 \text{ Support Points}$$

- 58. Base Support Points are calculated using the following formula:

$$\begin{aligned} \text{base_support_points} = \\ \text{purchased_subscription_units} \times 100 \end{aligned}$$

59. For example:

1 month = 100 Support Points
5 months = 500 Support Points
11 months = 1100 Support Points

60. Before confirming the payment, the supporter sees a summary containing:

- the number of purchased months,
- the total payment amount in USDC,
- the new subscription expiration date,
- the reward tier that will be reached,
- the list of eligible rewards,
- the number of base Support Points,
- information about the possible campaign success bonus.

61. If the reward tier contains a limited reward, the system verifies its availability before the transaction is confirmed.

62. The supporter confirms the USDC payment through their wallet.

E. Payment Verification

63. The system verifies that the campaign is active.

64. The system verifies that the campaign deadline has not passed.

65. The system verifies that the supporter has enough USDC.

66. The system verifies that the transferred amount matches the selected number of subscription units.

67. The system verifies that the payment token is the correct USDC token.

68. The system verifies that the transaction has not already been registered.

69. The system verifies the availability of limited rewards.

70. The system verifies that the supporter has not exceeded the per-user limit for a particular reward.

71. If any required condition is not satisfied, the transaction is rejected.

72. If all required conditions are satisfied, the payment is accepted.

F. Activating or Extending the Subscription

73. Every accepted payment purchases subscription units. During an active crowdfunding campaign, at most one unit per supporter per campaign is activated immediately, while all additional units remain pending until campaign settlement.

74. If the supporter does not have an active subscription and is eligible for an immediately activated unit, the subscription starts at the current time.

75. The immediate subscription expiration date is calculated using only the unit activated immediately. A separate projected expiration date includes the pending units that would be processed if the campaign succeeds.

76. Additional campaign units do not extend the subscription expiration date until the campaign succeeds.

77. Before payment, the system displays both the immediate subscription expiration date and the projected expiration date if all pending units are later activated.

78. The immediately activated unit extends the subscription by one month.
79. If the supporter already has an active subscription, only the immediately activated unit is added to the current expiration date. Additional campaign units remain pending until successful campaign settlement.
80. If the supporter has already reached the 12-month active subscription limit, no campaign unit is activated immediately. The first purchased unit is also held as pending and is processed as an excess unit only after successful campaign settlement.
81. For example:

Current expiration date: October 1
Purchased months: 5
New expiration date: March 1 of the following year

78. Purchased months do not overlap.
79. Each additional subscription unit extends the subscription by another month.
- a. The system enforces a maximum active subscription limit of 12 months ahead for any supporter.
 - b. If a purchase (after escrow release) exceeds the 12-month limit, the system calculates the number of excess subscription units.
 - c. Excess subscription units do not extend the supporter's subscription expiration date.
 - d. An excess unit converted into Support Points grants **200 SP in total**, instead of the standard 100 SP.
 - e. The supporter may opt-in to the "Community Airdrop" feature for their excess units during the checkout process.
 - f. If the Airdrop feature is enabled, the system distributes the excess subscription months as free trial periods to random platform users.
 - g. An excess unit assigned to Community Airdrop grants the supporter **300 SP in total**, instead of the standard 100 SP.
80. Exactly one subscription unit per supporter per campaign may be activated immediately. All remaining units remain pending until the campaign concludes.
81. When purchasing multiple subscription units during an active campaign, exactly 1 subscription unit is activated immediately and is non-refundable.
82. The USDC funds for the remaining purchased units are locked in an escrow smart contract until the campaign concludes.
- a. The remaining subscription units are held in a pending state and do not immediately extend the subscription expiration date.
83. If the campaign is unsuccessful, the supporter keeps only the subscription unit activated immediately. All remaining pending units are cancelled and their USDC payments are refunded.

G. Updating the Campaign and the Supporter's Contribution

82. The full payment amount increases the financial progress of the campaign:

campaign.raised_amount += payment_amount

83. The campaign target remains an amount expressed in USDC rather than a number of subscriptions.

84. The number of purchased subscription units is used to determine the supporter's individual rewards.

85. The amount paid in USDC is used to determine the overall campaign progress.

86. The system records the supporter's participation in the campaign.

87. The supporter contribution record contains at least:

supporter
campaign
purchased_subscription_units
contributed_amount
highest_reward_tier
reward_status
base_support_points
success_bonus_points
success_bonus_status

88. If the supporter makes additional purchases within the same campaign, the purchased subscription units are added together.

89. The USDC amounts contributed by the supporter within the same campaign are also added together.

90. For example:

First purchase: 4 months
Second purchase: 3 months
Third purchase: 4 months

Total:
11 subscription months

91. After every purchase, the system recalculates the highest reward tier reached by the supporter.

92. After purchasing four months, the supporter reaches the 1+ tier.

93. After purchasing a total of seven months, the supporter reaches the 5+ tier.

94. After purchasing a total of eleven months, the supporter reaches the 10+ tier.

95. The system stores only the highest reached tier and the cumulative reward package resulting from it.

96. Rewards from lower tiers are not granted multiple times.

97. If the supporter progresses from the 5+ tier to the 10+ tier, they receive an expanded package rather than a second copy of previously granted rewards.

98. If the supporter reaches a limited tier, the system reserves the relevant rewards according to the campaign rules.

H. Awarding Base Support Points

- 99. After payment confirmation, the supporter receives 100 confirmed Support Points for the immediately activated subscription unit. Support Points corresponding to pending subscription units are recorded as pending.
- 100. Base Support Points are calculated at 100 SP per purchased subscription unit.
- 101. Support Points associated with the immediately activated unit are confirmed immediately.
- 102. Support Points associated with pending units remain pending until campaign settlement.
- 103. If the campaign is unsuccessful, the supporter keeps only the confirmed Support Points associated with the immediately activated unit.
- 104. Confirmed Support Points are added to the supporter's available platform balance. Pending Support Points are tracked separately and cannot be redeemed until they become confirmed.
- 105. Support Points earned from different athletes are stored in one supporter balance.
- 106. For example:

Athlete A campaign: +500 SP

Athlete B campaign: +300 SP

Athlete C campaign: +200 SP

Total balance: 1000 SP

- 107. If the campaign succeeds, pending Support Points become confirmed.
- 108. If the campaign is unsuccessful, pending Support Points are cancelled.
- 109. Every Support Points award is recorded in the supporter's transaction history.
- 110. If a payment is reversed, cancelled, or refunded, the corresponding Support Points are removed.

I. Reaching the Minimum Success Threshold

- 109. The system continuously compares the raised amount with the minimum success threshold:

`campaign.raised_amount >= campaign.minimum_success_threshold`

- 110. Once the minimum threshold is reached, the campaign is considered financially viable.
- 111. The campaign may receive the following intermediate status: Funded
- 112. The campaign may continue until its original deadline even after reaching the minimum threshold.

- 113. Additional contributions may increase the campaign progress toward the main goal and stretch goals.
- 114. The individual rewards of campaign participants become eligible to be unlocked once the successful campaign ends.
- 115. Reaching the minimum threshold does not necessarily end the campaign early.

J. Main Goal and Stretch Goals

- 116. If the campaign reaches the main goal, an additional community-wide benefit is unlocked.
- 117. The community-wide benefit may apply to all campaign participants or all subscribers, depending on the campaign conditions.
- 118. If the campaign reaches a stretch goal, another additional benefit is unlocked.
- 119. An example structure may look as follows:

Minimum success threshold: 800 USDC

- the campaign can be completed
- individual reward tiers will be unlocked

Main goal: 1000 USDC

- additional training content for campaign participants

Stretch goal: 1250 USDC

- group livestream with the athlete

- 120. Individual reward tiers depend on the number of subscription units purchased by a particular supporter.
- 121. The main goal and stretch goals depend on the total amount raised by the entire community.
- 122. These are two separate mechanisms:

individual number of purchased subscription months

→ individual reward package

total campaign amount

→ campaign status and community rewards

K. Successful Campaign Completion

- 123. When the campaign deadline passes, the system verifies the final amount raised.
- 124. If the raised amount is equal to or greater than the minimum success threshold, the campaign receives the following status: Successful
 - a. The USDC funds locked in escrow are automatically released to the athlete.
 - b. The pending subscription units locked in escrow are formally activated and applied to the supporters' accounts.
- 125. All individual reward tiers are unlocked according to the highest tier reached by each supporter.
- 126. Rewards connected to the achieved main goal are unlocked.
- 127. Rewards connected to achieved stretch goals are unlocked.
- 128. The athlete receives a list of campaign participants.
- 129. The athlete receives information about the rewards owed to each participant.
- 130. A reward fulfillment record is created for every reward.
- 131. The status of an individual reward may have the following values:

Locked

→ Unlocked

→ In progress

→ Fulfilled

- 132. Physical rewards may use additional statuses:

Awaiting shipping details

→ Preparing shipment

→ Shipped

→ Delivered

- 133. Sessions or meetings may use the following statuses:

Awaiting scheduling

→ Scheduled

→ Completed

- 134. The athlete fulfills the promised rewards.
- 135. After the reward has been delivered, it is marked as fulfilled.

L. Campaign Success Support Points Bonus

136. Supporters who participated in a successful campaign receive an additional Support Points bonus.
137. The bonus is available to every supporter who purchased at least one subscription unit during the campaign.
138. The bonus is calculated based on the base Support Points earned within that campaign.
139. An example formula may look as follows:

$$\text{success_bonus_points} =$$
$$\text{base_support_points} \times \text{success_bonus_rate}$$

140. The exact bonus percentage is a platform parameter that remains to be defined.
141. For example, with a 20% bonus:

Purchased months: 5

Base Support Points: 500

Success bonus: 100

Total: 600 Support Points

142. The bonus may only be awarded once for each subscription unit purchased during the campaign.
143. The bonus may be awarded after the campaign is formally completed and marked as **Successful**.
144. Reaching the main goal or stretch goals does not automatically award additional Support Points unless the platform rules are expanded in the future.
145. For the first version of the platform, one bonus for reaching the minimum success threshold is sufficient.

M. Unsuccessful Campaign Completion

146. If the campaign deadline passes before the minimum success threshold is reached, the campaign receives the following status:

Unsuccessful

147. Supporters keep the subscription unit activated immediately but do not receive the remaining pending subscription units.
- The USDC funds for the pending subscription units locked in escrow are automatically refunded to the supporter's wallet.
 - The supporter does not receive the pending subscription months, keeping only the 1 month that was activated immediately.
148. Purchased months remain active until their calculated expiration date.

149. Supporters continue to have access to the athlete's standard subscriber-only content.
150. Supporters keep only the confirmed base Support Points associated with the immediately activated subscription unit.
151. Supporters do not receive the campaign success Support Points bonus.
152. No individual campaign reward tiers are unlocked if the campaign is unsuccessful.
153. Rewards connected to the main goal and stretch goals are not unlocked.
154. Participants in the unsuccessful campaign receive a low-cost digital benefit or supporter status.
155. Such a benefit may include:
 - a special campaign participant badge,
 - a digital thank-you message,
 - additional digital content,
 - access to behind-the-scenes updates,
 - priority access to a future campaign,
 - participation in a community vote.
156. The payment for the immediately activated subscription unit is non-refundable. Payments for all remaining pending units are automatically refunded from escrow.

N. Core Properties of Support Points

157. Support Points are assigned exclusively to the account of the supporter who earned them.
158. Every supporter has an individual Support Points balance.
159. Support Points are non-transferable.
160. A supporter cannot transfer Support Points to another user.
161. A supporter cannot sell Support Points.
162. A supporter cannot directly exchange Support Points for USDC.
163. A supporter cannot withdraw Support Points from the platform.
164. Support Points are not intended for open-market trading.
165. Support Points do not have a guaranteed monetary value.
166. Support Points may only be used for features and rewards offered within the platform.
167. Support Points earned by a supporter remain assigned to their platform account.
168. The system prevents a Support Points balance from becoming negative.

O. Platform Cosmetic Store

169. The platform provides a store containing cosmetic rewards.
170. Supporters may exchange Support Points for rewards available in the platform store.
171. Cosmetic rewards do not have direct financial value.
172. Example cosmetic rewards may include:
 - profile frames,
 - supporter badges,

- titles displayed next to the supporter's username,
 - special profile colors,
 - animated profile elements,
 - collectible campaign markers,
 - special reactions,
 - interface themes,
 - **Bronze Backer**, **Silver Backer**, and **Gold Backer** statuses.
173. Every cosmetic reward has a defined Support Points price.
174. Example prices may look as follows:

Campaign Supporter Badge: 300 SP

Animated Profile Frame: 750 SP

Gold Backer Theme: 1500 SP

175. Before a purchase, the system verifies that the supporter has enough Support Points.
176. After the purchase is confirmed, the appropriate number of Support Points is deducted from the supporter's balance.
177. The cosmetic reward is assigned to the supporter's account.
178. A purchased cosmetic reward cannot be transferred to another user.
179. A purchased cosmetic reward cannot be resold.

P. Athlete Stores

180. An athlete may optionally create their own rewards store.
181. Participation in the athlete store system is voluntary.
182. The athlete may offer separate rewards available in exchange for Support Points.
183. Rewards offered in the athlete's store are independent of the reward tiers of a particular crowdfunding campaign.
184. Example rewards may include:
- an autograph,
 - a signed photograph,
 - a personalized message,
 - exclusive video content,
 - participation in a group Q&A,
 - early access to content,
 - a digital collectible,
 - a limited sports-related item,
 - access to an online meeting,
 - a training session.
185. For every reward, the athlete defines:

reward_name

description

support_points_price

available_quantity

maximum_per_user

availability_start

availability_end

fulfillment_type

- 186. The athlete defines the reward price in Support Points.
- 187. The athlete may define the total number of available reward units.
- 188. The athlete may define the maximum number of purchases allowed per supporter.
- 189. The athlete may define the period during which the offer is available.
- 190. An example offer may look as follows:

Signed photograph

Price: 1200 Support Points

Available quantity: 20

Maximum per user: 1

Q. Exchanging Support Points for an Athlete Reward

- 191. The supporter opens the selected athlete's store.
- 192. The supporter selects a reward available in exchange for Support Points.
- 193. The system verifies that the offer is still active.
- 194. The system verifies that the reward is still available.
- 195. The system verifies that the supporter has enough Support Points.
- 196. The system verifies that the supporter has not exceeded the purchase limit for that reward.
- 197. The supporter confirms the Support Points redemption.
- 198. The appropriate number of Support Points is deducted from the supporter's balance.
- 199. The available quantity of the reward is reduced.
- 200. A reward entitlement or order is created for the supporter.
- 201. The athlete receives information about the new order.
- 202. The reward fulfillment status may have the following values:

Reserved

→ Awaiting details

→ In progress

→ Shipped / Scheduled

→ Fulfilled

- 203. For a physical reward, the supporter may be asked to provide shipping details.
- 204. For a session or meeting, the supporter may be asked to select a date and time.
- 205. The athlete fulfills the reward.
- 206. After fulfillment is completed, the reward receives the **Fulfilled** status.
- 207. If the reward cannot be fulfilled due to the athlete's or platform's fault, the spent Support Points are returned to the supporter.
- 208. The athlete does not receive the supporter's spent Support Points in their own balance.
- 209. Support Points used for rewards are burned:

redeemed Support Points → burned

R. Separation of Reward Types

- 210. Campaign reward tiers and athlete store rewards are two separate mechanisms.
- 211. Campaign reward tiers depend on the number of subscription months purchased by the supporter within one particular campaign.
- 212. Campaign reward tiers do not require the supporter to spend Support Points.
- 213. Reaching a campaign reward tier does not reduce the supporter's Support Points balance.
- 214. Athlete store rewards are purchased using Support Points accumulated by the supporter.
- 215. Support Points may have been earned through campaigns run by different athletes.
- 216. Spending Support Points in a store does not change the number of subscription months purchased by the supporter.
- 217. Spending Support Points does not change the campaign reward tier reached by the supporter.

The supporter purchases 10 subscription units.

Immediately after purchase:

- 1 subscription month is activated,
- 9 subscription units remain pending,
- the supporter receives 100 confirmed Support Points,
- 900 Support Points remain pending,

- the 10+ campaign reward tier is recorded as eligible but remains locked.

If the campaign succeeds:

- the 9 pending units are activated,
- the 900 pending Support Points are confirmed,
- the 10+ reward tier is unlocked,
- the supporter receives the campaign success SP bonus.

S. Support Points History and Security

- 219. The platform stores the history of all Support Points operations.
- 220. Operation types may include:

Earned

Success bonus

Redeemed

Refunded

Revoked

- 221. Every history record contains at least:

user

points_amount

operation_type

campaign_or_reward_reference

timestamp

transaction_reference

- 222. Each payment may award base Support Points only once.
- 223. Each campaign may award a particular supporter the success bonus only once.
- 224. The system prevents the same transaction from being processed multiple times.
- 225. If a subscription purchase is reversed, the related Support Points are revoked.
- 226. If the supporter has already spent Support Points originating from a payment that was later reversed, the account must be flagged for additional verification.

- 227. An athlete should not be able to earn Support Points by supporting their own campaign.
- 228. The platform may use additional protections against multiple-account abuse and artificial Support Points farming.
- 229. No operation may cause the Support Points balance to become negative.
- 230. All balance-changing operations must be verifiable through the supporter's account history.

T. Payouts and Vesting

T1. Standard subscription payments, including the immediately activated subscription unit purchased during a crowdfunding campaign, are subject to monthly vesting.

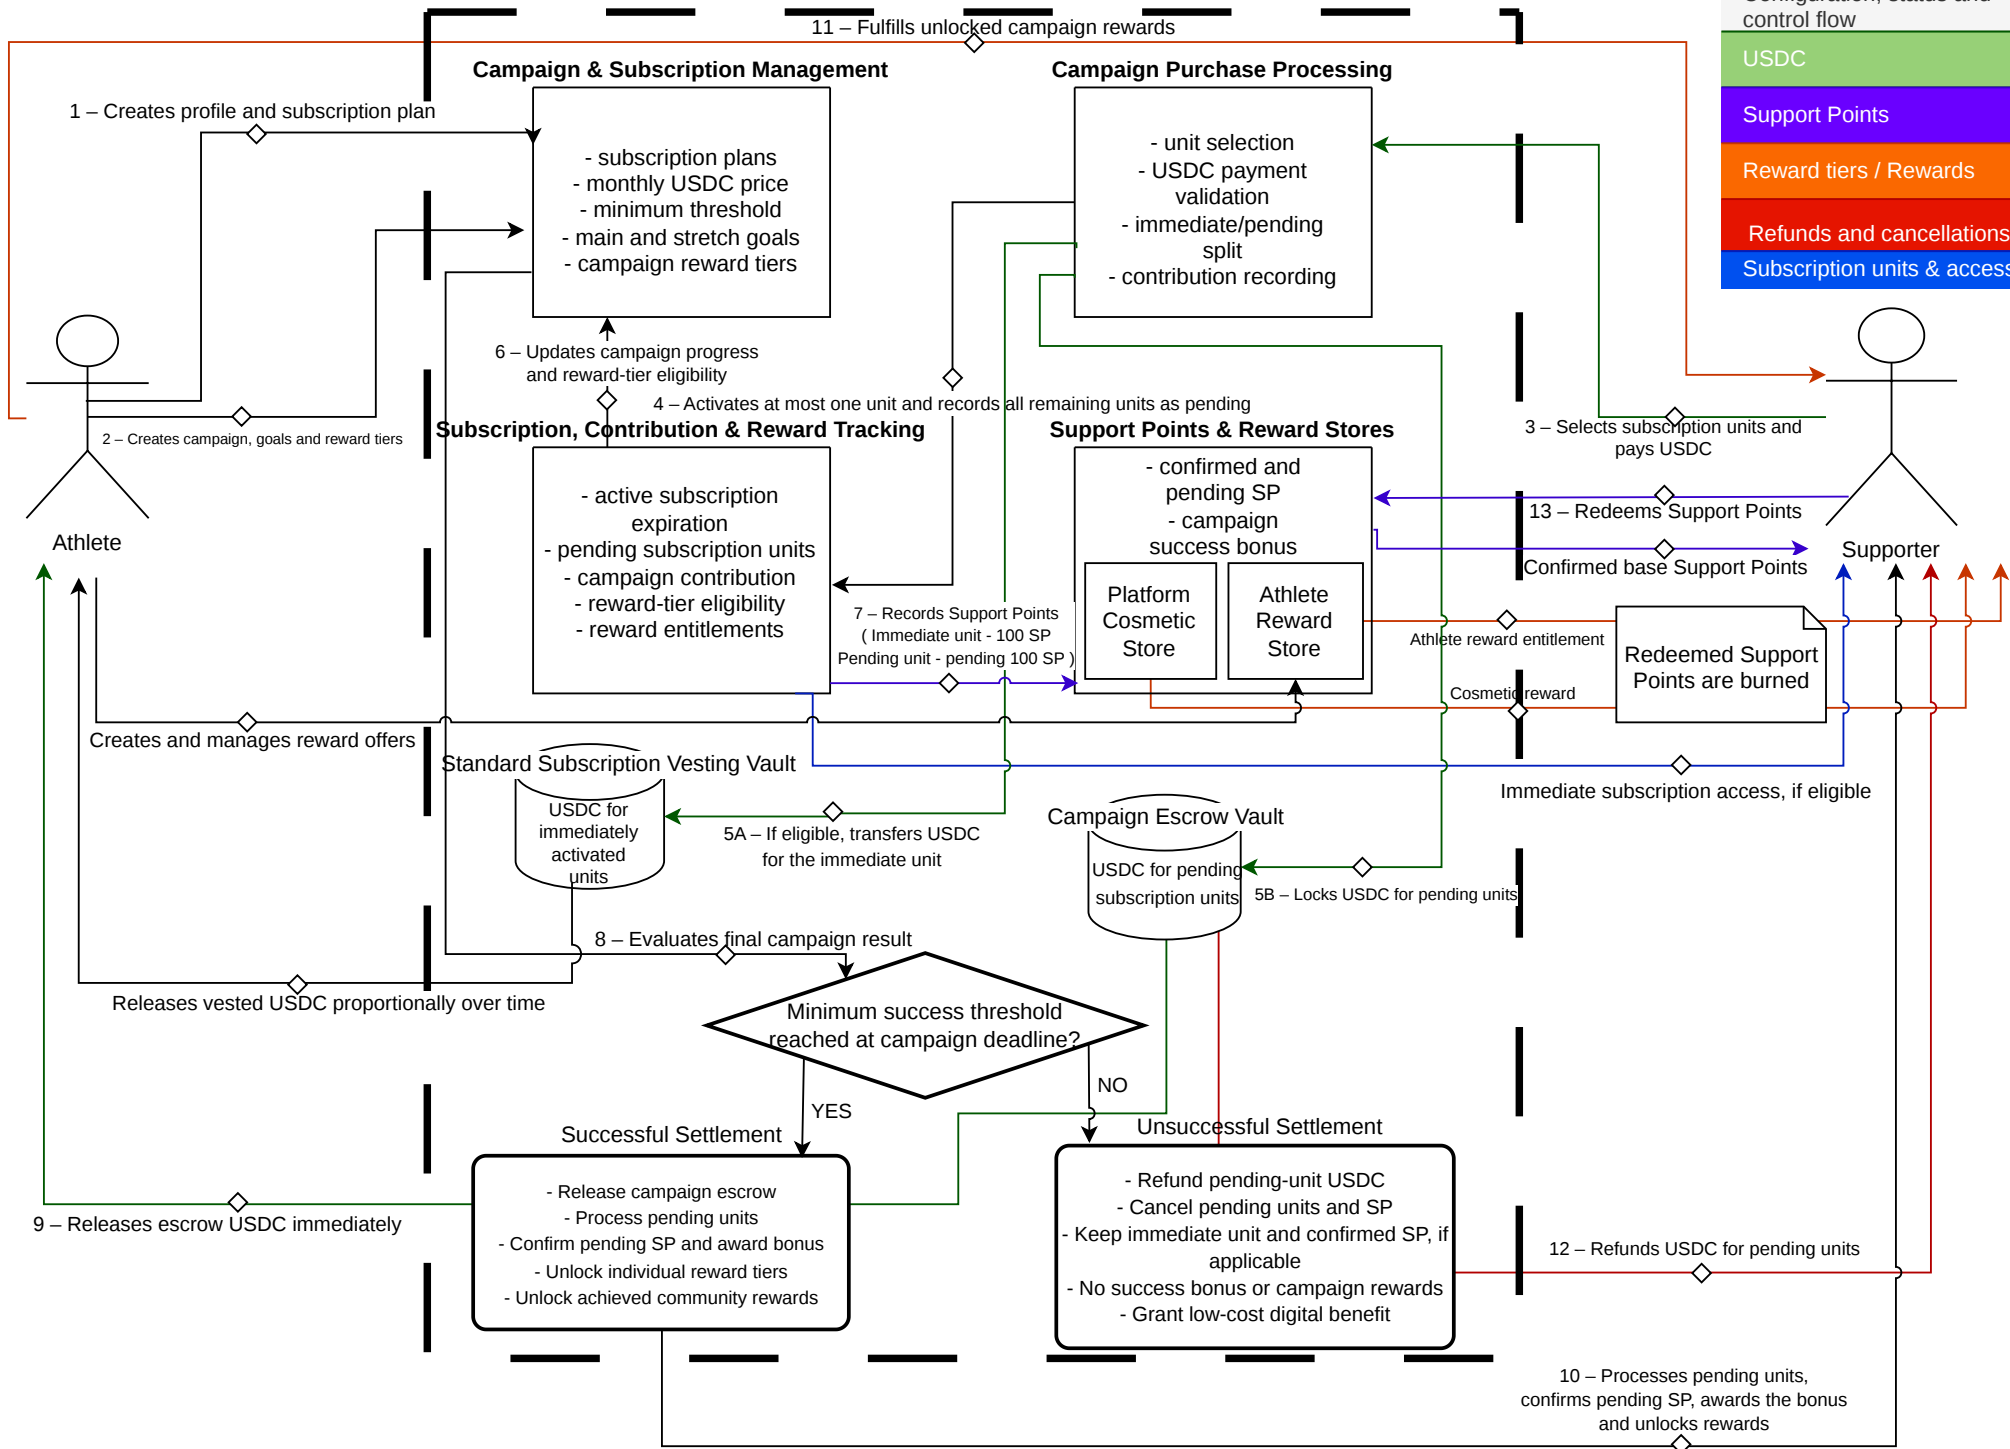

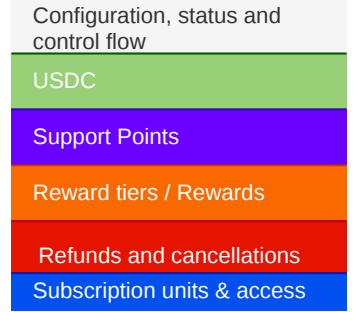

T2. Vested funds are released to the athlete proportionally over the duration of the purchased subscription (e.g., month by month).

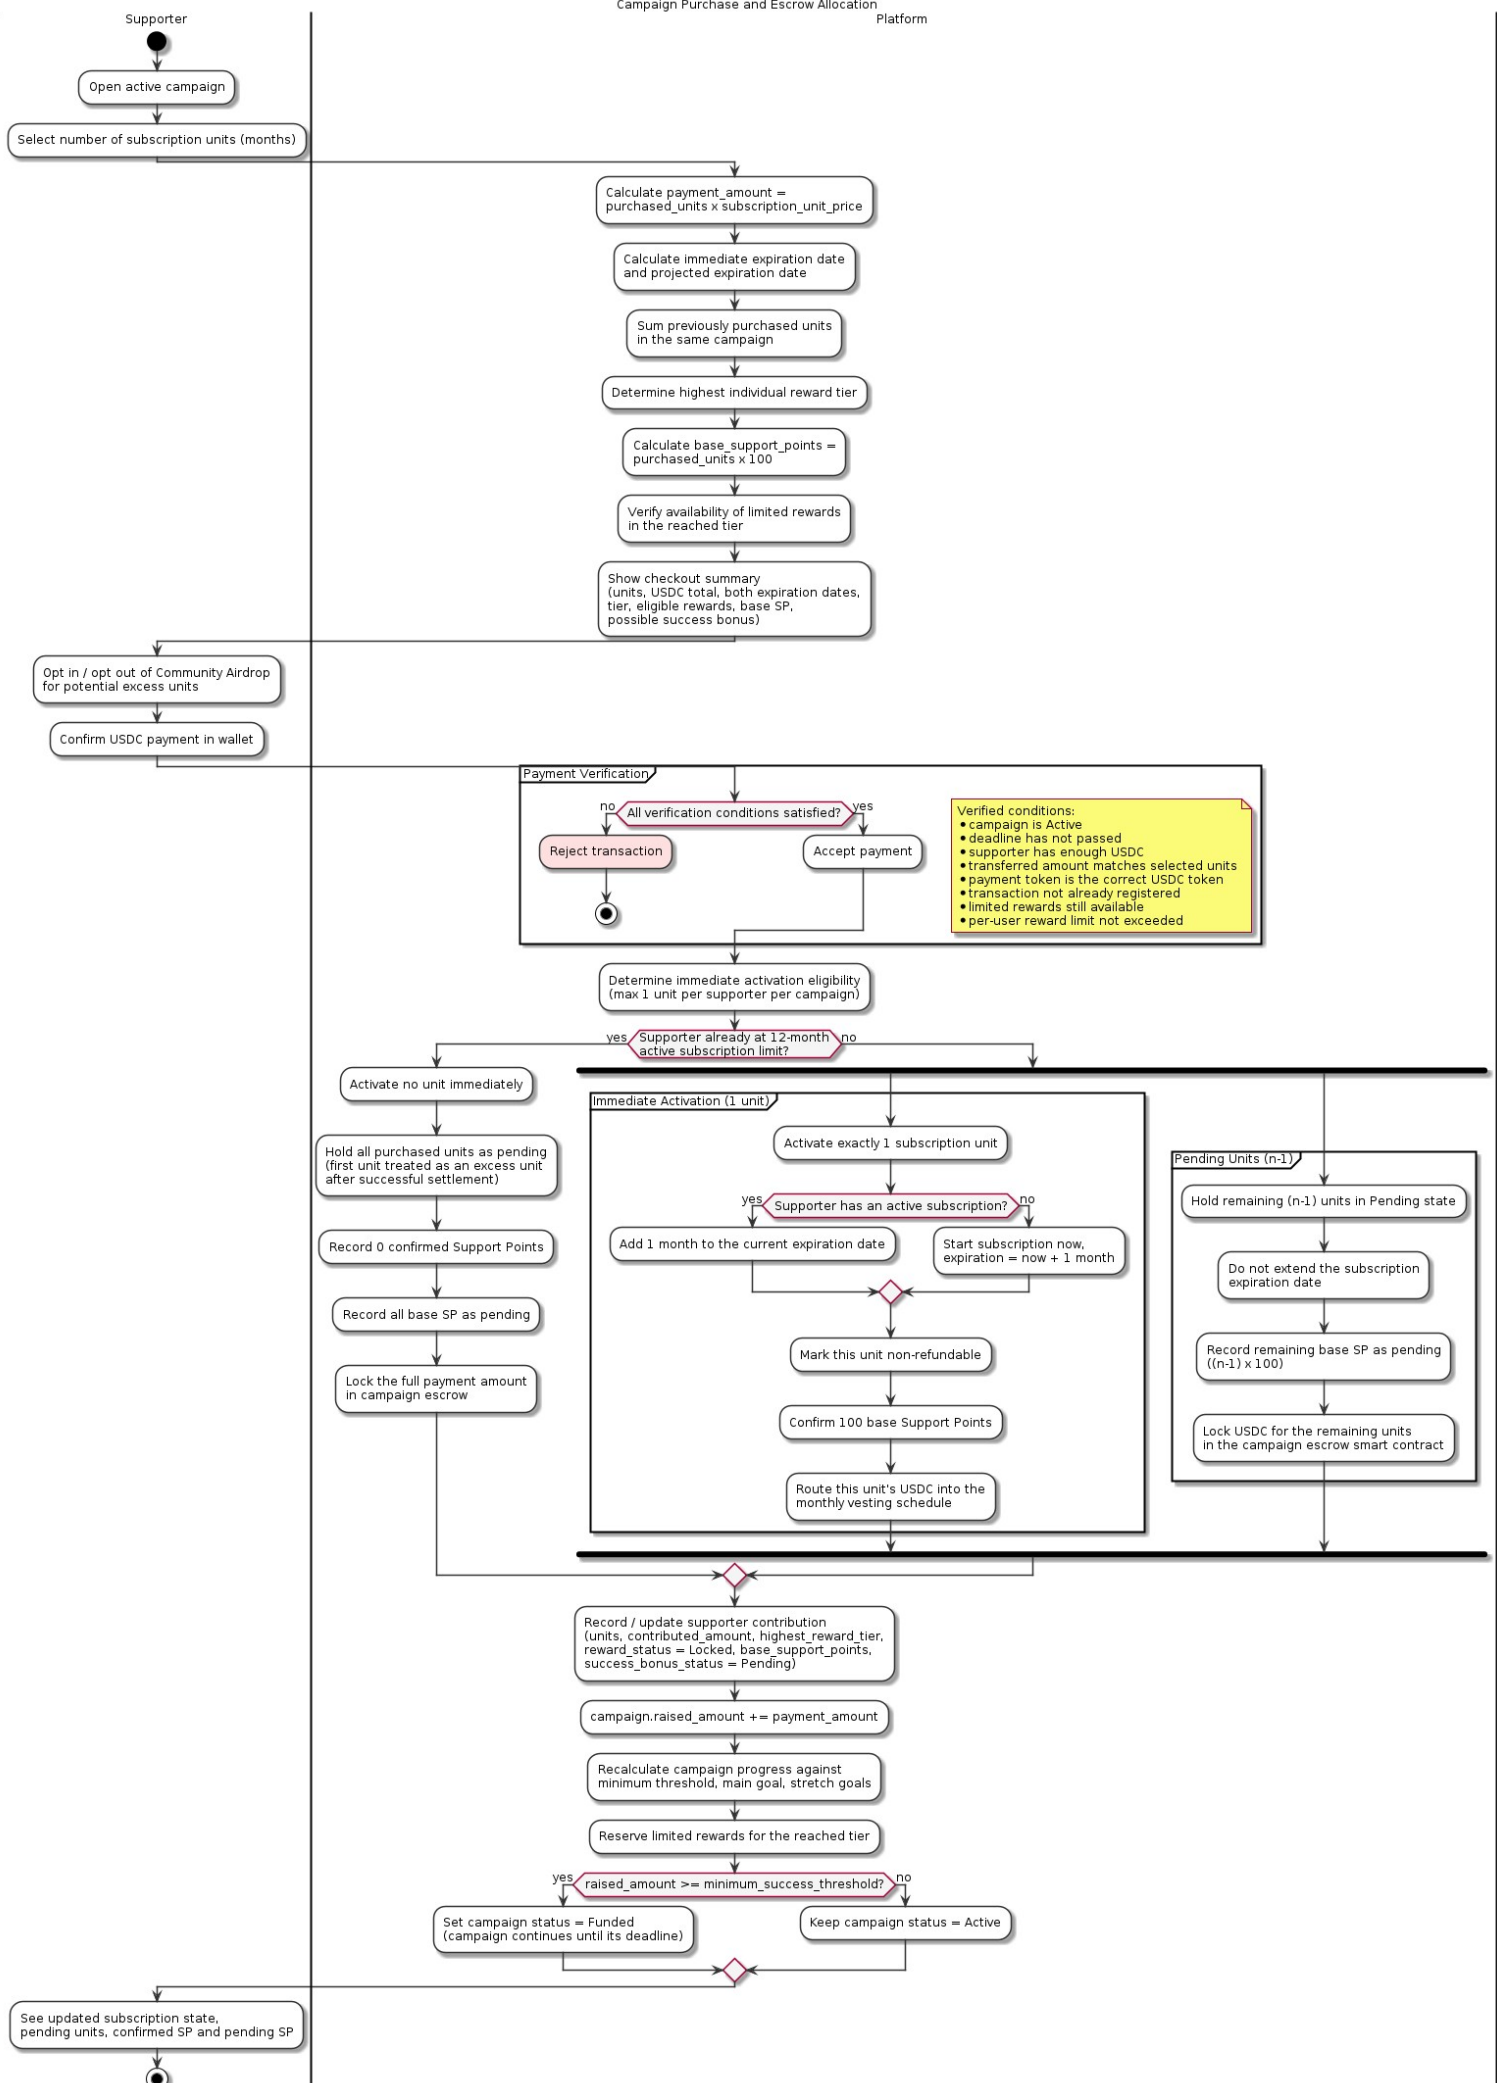

T3. Funds released from campaign escrow after successful campaign completion are exempt from the monthly vesting schedule.

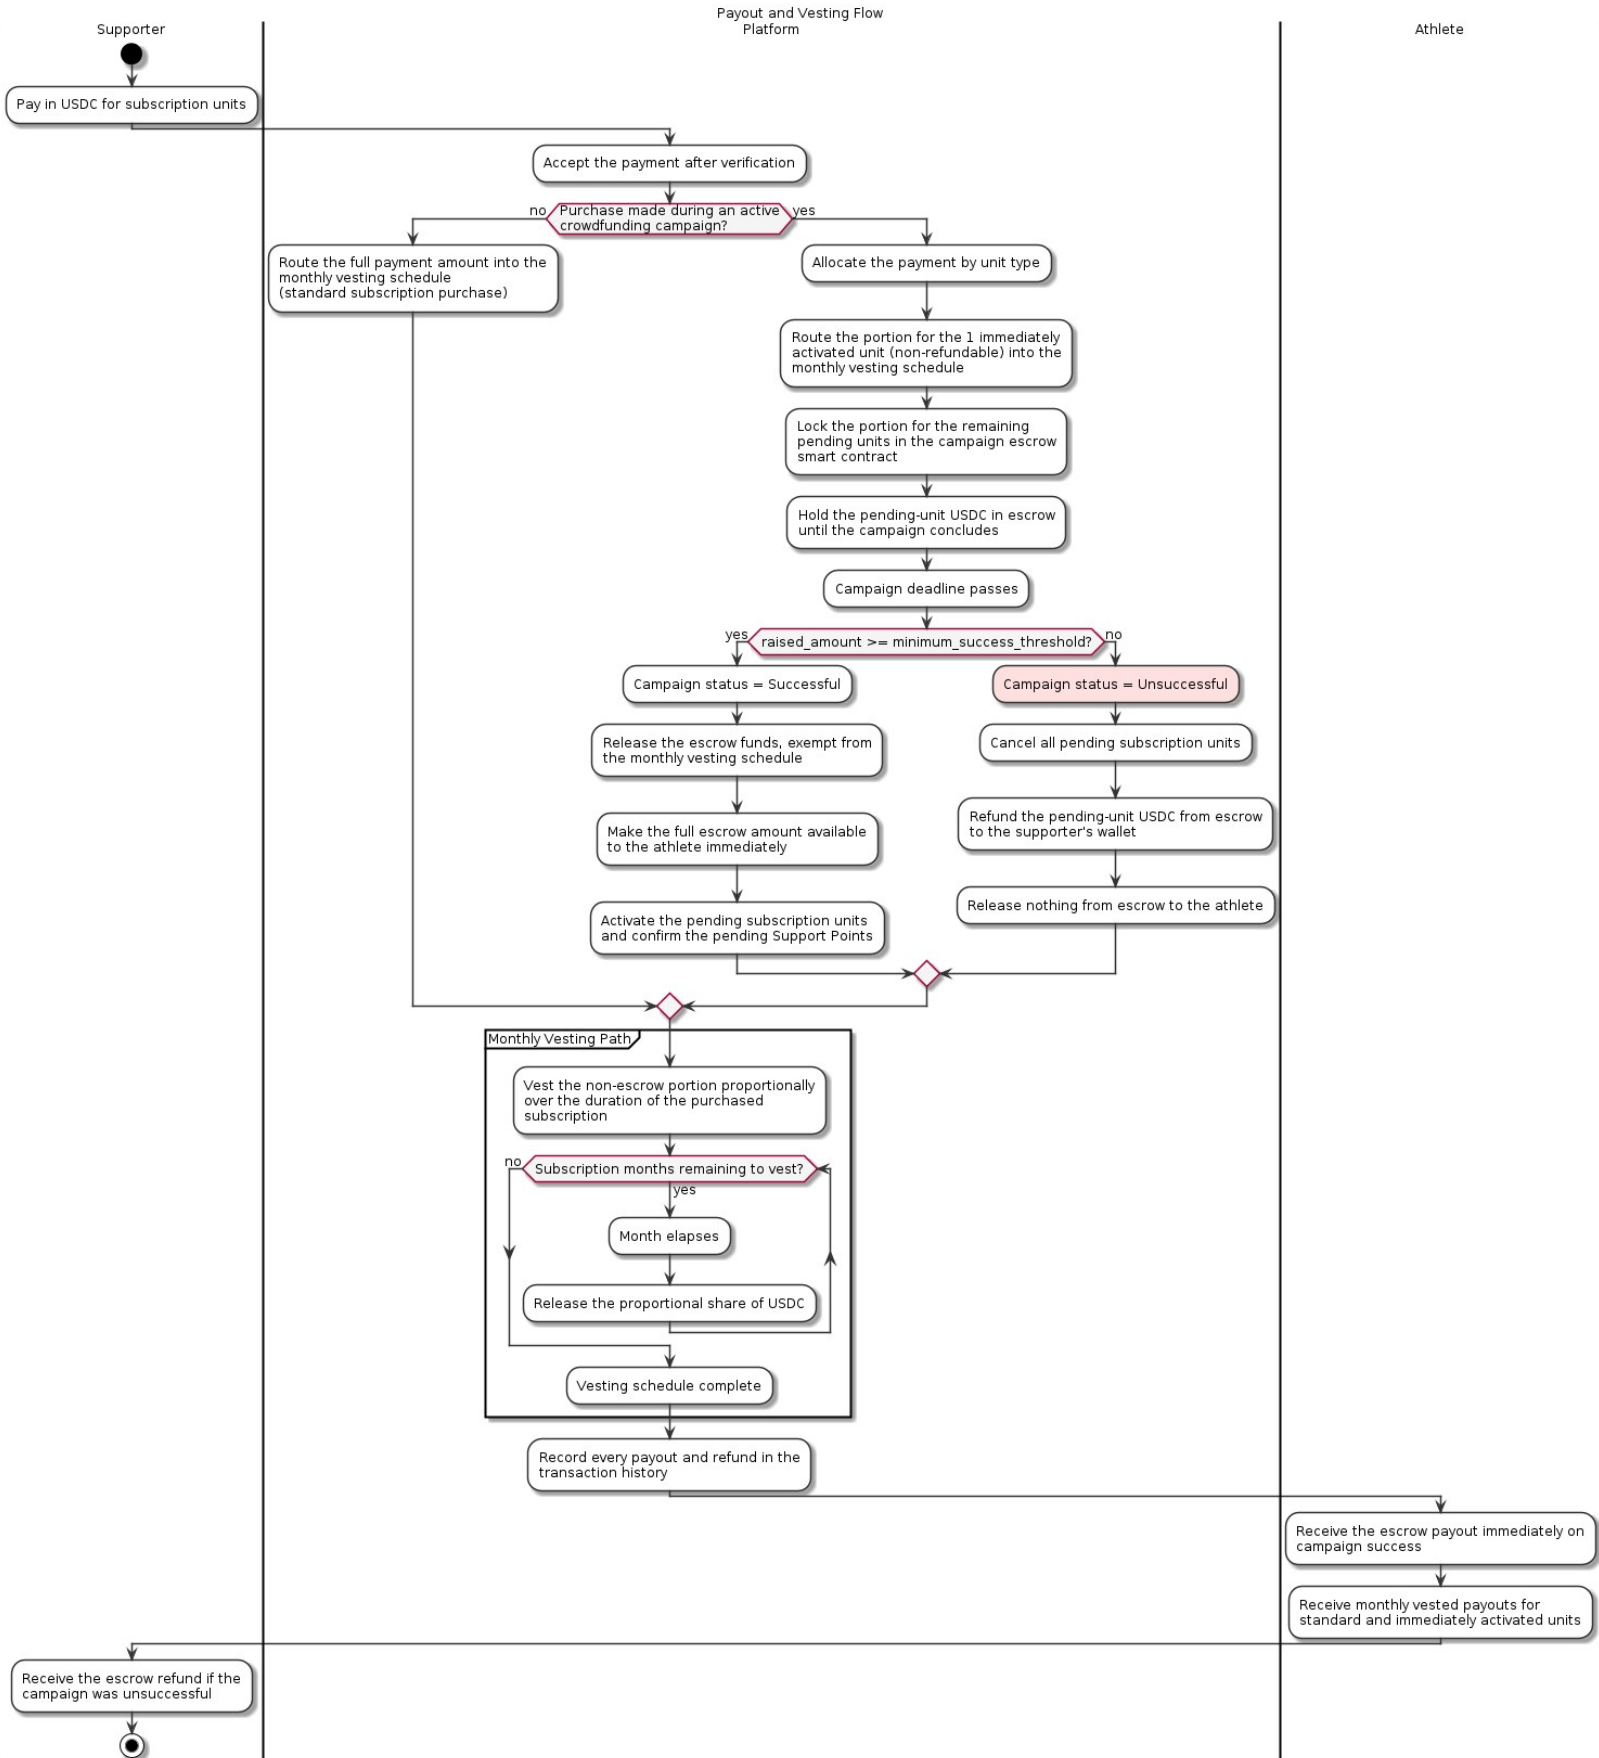

T4. Upon successful campaign completion, all USDC funds released from campaign escrow are made available to the athlete immediately. Payments associated with immediately activated units continue to follow their standard monthly vesting schedule.
